

Gladden Front Stage Adjuster

... put your star in the middle of the dashboard !

Why

When you are desperate with your sound system.
When the drums beat under your feet. The piano is
on the right. The voice of your favorite singer is
behind you. And all of them are quite a bit confused.
Take the new G_FSA, turn the knob and
PUT THEM ALL IN THE RIGHT PLACE!!!

How it works

It operates by a phase shifting at selected frequency
range, applied to the drive side channel. Build with high
sound performance analog components, it is designed
to maintain unaltered the sound quality

Features & Specs

Essential & economic alternative to some DSP settings. It can be used with external DSP devices or car radios
equipped with DSP suitable for any sound system, 1/2/3 ways, and for any
position of installation of tweeters and other front speakers. Easy to be connected to the source, only through
the Drive Side Pre-Out, Double side SMT technology design for the smallest size.
